2.3. General Qualitative disclosures

a. Risk Management: Objectives and Organization Structure

- The bank has a credible and comprehensive risk management structure and has taken various initiatives to strengthen the risk management practices. The Bank has an integrated approach for management of risk. The risk management policies are commensurate with the business requirements and are as per the guidelines of Reserve Bank of India. The risk management system encompasses the different types of risks viz. credit risk, market risk and operational risk.
- The bank has also formulated board approved country specific risk policy for its overseas branches i.e. Hong Kong and Dubai branch and the policies are drawn based on the risk dimensions of Hong Kong and Dubai economy and the bank's risk appetite.
- The Board of Directors of the Bank has an oversight of Risk Management activities of the Bank. The Bank's Supervisory Committee of Directors on Risk Management is the Apex Body/Committee to oversee various Risk Management activities. The Bank also has separate Committees of Top Executives i.e., Credit Risk Management Committee (CRMC), Asset & Liability Committee (ALCO) and Operational Risk Management Committee (ORMC) to deal with Credit, Market and Operational Risk respectively. Further, the bank has Risk Management organizational structure in place not only at corporate office but also at

Regional Offices/Field General Manager's Offices. The broad risk management organizational structure of the bank is furnished as under:

2.4. Credit Risk:

a. Credit Risk Governance

- Credit risk arises from the potential that an obligor is either unwilling to perform on an obligation or its ability to perform such obligation is impaired resulting in economic loss to the bank.
- The Bank is exposed to Credit Risk through Lending and Investment activities.
- Bank has well laid down Loan Policy, Credit Risk Management Policy, Real Estate Policy and Credit Risk Mitigation (CRM) Techniques & Collateral Management Policy which covers guidelines on the entire gamut of Credit Risk Management Process. The policies are reviewed every year; and if required more frequently, to incorporate changes in Rules & Regulations by Regulatory Authorities / Government, Business Requirements and Economic Environment.

Liquidity Risk

Bank uses 'Cash-Flow Approach' & 'Stock Approach' for managing, monitoring & measuring liquidity risk. Liquidity Risk is tracked through maturity or cash flow mismatches. Use of maturity ladder and calculation of gaps at various 'time-buckets', is adopted as standard tool for measuring Liquidity Risk. Prudential limits on tolerance level of mismatches are in place and monitored & reported to RBI on a fortnightly basis. Under stock approach, various ratios / limits are in place .Stress tests are carried out at various levels of adversity. The Liquidity / Funds requirements under Stress Situations, sources of raising the funds & its possible impact on Profit & Loss are worked out at quarterly interval.

Short-term Dynamic Liquidity Statement is prepared and monitored on a monthly basis to assess the Liquidity Position, which takes into account the Business Growth.

Interest Rate Risk

Bank uses Traditional Gap Analysis (TGA) to assess the impact on the Net Interest Income (NII) of the bank in short run, i.e. upto end of Financial Year. Bank also uses Duration Gap Analysis (DGA) to assess long-term impact of changes in interest rate on Market Value of Equity (MVE) in terms of RBI Guidelines.

Foreign Exchange Risk

The Bank has fixed various exposure limits such as Maximum Daylight Limit, Overnight Limit, Aggregate Gap Limit (AGL), Stop Loss Limit and Deal Size Limits. Bank has also fixed VaR limit on Foreign Exchange position which is being monitored on daily basis. Derivative transactions are monitored by fixing prudential limit for stop loss and a cap for PV01 on the outstanding derivatives for market making position.

Equity Price Risk

In terms of Banks' Treasury Policy, limits are in place with respect to Trading Book size in Equity, Deal size, Holding Period & Stop Loss Limits. These limits are monitored on a daily basis.

Structure and Organisation of Market Risk Management function:

The Board of Directors approves policies covering management of Market Risk. The Board is supported by three levels:

- Supervisory Committee of ALM & Risk Management
- Asset Liability Management Committee
- General Manager (Risk Management Department)

Scope:

Bank has put in place various limits to measure, monitor & manage market risk. Day Light Limits, Overnight Limits, Deal-size Limits, Aggregate Gap Limits (AGL), Individual Gap Limits (IGL), Stop Loss Limits, Trading Book size, Issuer wise Limits, VaR limits, NOOP limit, etc.

The limits are monitored on daily basis and a reporting system to the top management is in place.

Stress testing Framework for Liquidity & Market Risk is in place & stress tests are conducted on quarterly basis. The results are deliberated at ALCO & placed before the Board.

Hedging & mitigating risk:

Policies for hedging Banks' position are laid down in the Bank's Treasury Policy. Hedge transactions for banking books are assessed/ reviewed at periodic intervals.

Quantitative Disclosures

Bank has adopted the standardized Duration Approach as prescribed by RBI for computation of capital charge for market risk and is already fully compliant with such RBI guidelines. The capital requirement for market risk are as under:

(Rs. in Cr)

Risk Category	Capital Charge
Interest Rate Risk	779.42
Equity Position Risk	401.42
Foreign Exchange Risk (including gold)	12.15
Total capital charge for market risk under standardised duration approach	1192.99

Table DF-8: Operational Risk

Qualitative Disclosures

- Operational Risk is the risk of losses resulting from inadequate or failed internal processes, people and systems or from external events.
- Operational Risk exists at all levels and at all business lines.
- At present, operational risk is largely managed through internal controls, Operational risk Management Framework and audit system.

•

- Bank has put in place the following measures to control / mitigate operational risk.
 - System of delegated authority covering credit and expenditure

- Book of instructions and issuance of instructions through circulars from time to time
- Continuous training process
- Preventive vigilance
- Insurance
- Risk Based Internal Audit
- Outsourcing policy
- Compliance Policy
- Policy on Business Continuity
- Bank has well laid down Operational Risk Management Policy, which covers :
 - Organisational structure
 - Identification, assessment, monitoring and control of operational risk.
 - Capital Charge for operational risk
 - Reporting framework
 - Guidelines on reporting and collection of Operational Risk Loss Data
 - Policy on mapping of activities to 8 business lines
- Bank has an appropriate and independent organizational structure with oversight mechanism for management of Operational risk, which includes Operational Risk Management Committee (ORMC) of Top Executives and a separate Risk Management Department looking after the Operational Risk. Besides, there is a separate Board Level Committee i.e., Supervisory committee of the Board to oversee the functioning of Risk Management and ALM.
- ORMC deals with new product approval process, analysis of frauds, analysis of operational risk loss data, analysis of the exercise of mapping bank's activities and income into 8 business lines.
- Bank has Product Evaluation Committee in place which evaluates the new as well as modifications in products/ processes before presenting the same to ORMC.
- The bank has adopted Basic Indicator Approach for calculating capital charge for operational risk. Bank has been continuously working on all the qualitative and quantitative requirements for The Standardized Approach (TSA) and various data elements of AMA i.e. Internal Loss Data, External Loss Data, Business Environment and Internal Control Factors (BEICFs) and Scenario Analysis. Bank has already applied for TSA and is in process of implementing Integrated Risk Management Software solution.
- As per RBI directives, the bank has to maintain capital for operational risk under Basic Indicator approach (BIA) w.e.f.31.03.2008. The capital charge as per BIA on 31.03.2014 is Rs. 1356.86 crores.

Risk Profiling

Bank compiles Operational Risk Profile Template (RPT) on a half yearly basis by which it assesses the level and direction of inherent risk, internal control risk and resultant net Operational Risk based on the following:

- People Risk
- Outsourcing Risk
- Process Risk
- Technology Risk
- Reputation Risk
- Event Risk

Table DF-9: Interest rate risk in the Banking Book (IRRBB)

(a) Qualitative Disclosures

Interest rate risk may arise where changes in market interest rates might adversely affect Bank's financial position. The immediate impact of changes in interest rates is on Bank's earnings through changes in its Net Interest Income (NII). A long-term impact of changes in interest rates is on Bank's Market Value of Equity (MVE) or Net worth through changes in the economic value of its assets, liabilities and off-balance sheet positions. Bank holds assets, liabilities and off balance sheet items with different maturities or re-pricing dates which may be linked to different benchmark rates. This creates exposure to unexpected movements in interest rates.

Traditional Gap Analysis (TGA) is used to measure and monitor Interest rate risk through Rate Sensitive Gap (RSG). Impact of changes in interest on Net Interest Income (NII) is computed. Limit on RSG upto 1 Year is fixed to limit impact of interest rate changes from earning perspective. Interest rate sensitivity statement as per TGA is prepared as on the last day of each month. ALCO reviews the same on monthly basis. Impact of changes in broad categories of assets and liabilities, i.e. deposits, advances, investments and others upto the end of the financial year is worked out.

In terms of RBI guidelines, Bank also carries out Interest Rate Sensitivity as per Duration Gap Analysis (DGA) on monthly basis to capture impact of changes in interest rates on economic value of bank's assets and liabilities in banking book and thereby on Market Value of Equity (MVE). The impact is worked out assuming 200 bps parallel shifts in yield curve.

Framework:

Bank has formed Asset Liability Management Committee (ALCO), headed by Chairman & Managing Director/ Executive Director, which is responsible for evolving appropriate system and procedures for identification and analysis of liquidity/market risk and has laid down ALM policy of the bank. The ALCO is assisted by a dedicated 'ALM Desk' and an independent 'Mid-Office'. Supervisory Committee of the Board of Directors on ALM and Risk Management oversees the functioning of ALCO and also the implementation of the system & procedure for Asset Liability Management (ALM).

(b) Quantitative Disclosures

The impact of earnings and economic value of equity assuming a percentage shift in interest rates is as under:

(Rs. in crs)

	Parameter	Impact
1	Earnings at Risk (NII):estimated impact on NII with adverse change in rate of interest by 2.00% (up to 1 year)	252
2	Market value of Equity: 200 bps shock	1180

Table DF-10: Counterparty Credit Risk

Qualitative Disclosures

The Bank deals in two groups of derivative transactions within the framework of RBI guidelines.

- i) Over the Counter Derivatives
- ii) Exchange traded Derivatives

The Bank deals in Forward Rate Agreement, Interest Rate Swaps, Cross Currency Swap and Currency Options in Over the Counter Derivatives group.

The Bank undertakes derivative transactions for proprietary trading/market making, hedging own balance sheet and for offering to customers, who use them for hedging their risks within the prevalent regulations. Proprietary trading/market making positions are taken in Rupee Interest Rate Swap, Currency Futures and Interest Rate Futures. While derivative instruments present immense opportunity for making a quantum leap in non-interest income and also for hedging market risk, it exposes the Bank to various risks. The Bank has adopted the following mechanism for managing different risks arising out of derivative transactions.

Exposures Related To Counterparty Credit Risk

Counterparty Credit Risk (CCR) is the risk of default by the counterparty towards settlement of the transaction before or at maturity. Counterparty credit risk management framework for financial market products of the Bank are governed by:

- Credit Risk Policy for credit related processes around limit set-up as well as measurement and monitoring.
- Derivative Policy- for product related framework.

Counterparty Credit Risk (CCR) Limits are approved based on guidelines outlined in the Bank's Credit Policy and requirements of the counterparties. Bank Counterparties are assessed based on an internal model that considers parameters such as credit rating, capital adequacy, and resource raising ability, asset quality, management assessment, profitability, liquidity and systemic importance. In case of non-bank counterparties, CCR limit is approved based on a detailed credit assessment process followed by the Bank as per the Credit Policy. CCR limits are set on the amount and tenor while fixing the limits to respective counterparties with distinct limits for each type of product and post approval of the credit limit, the credit exposures are monitored on a daily basis against approved limits.

All the Derivative transactions with the Counterparty are evaluated through Board approved Treasury Policy- (Derivatives) of the Bank. The Bank has classified various derivative transactions in categories based on complexity of the transactions. Counterparties are evaluated based on their financial strength, subject understanding and infrastructure vis-à-vis complexity category of the transaction type for eligibility to transact.

In addition to this, the MTM for the clients are monitored on a regular basis and circulated to the top management of the Bank. Also, the Bank monitors concentration in MTM exposures across currency pairs, ratings, products, maturities, to understand the inherent credit risk in the derivatives portfolio to enable the management to focus on key risk areas. The Bank also tries to monitor the quality of the underlying by trying to capture if the underlying exposure being hedged by the derivative is an existing exposure of the Bank. Capital for CCR exposure is assessed based on Basel Standardized Approach.

Policies for securing collateral and establishing credit reserves:

In order to mitigate CCR, the Bank has Credit Risk mitigation measures viz. collateralization, guarantees, netting, break clause, etc which form a part of the Derivative Policy and are exercised by the Bank as and when deemed necessary.

Impact of the amount of collateral the bank would have to provide given a credit rating Downgrade

The Bank is yet to enter into any Credit Support Annex (CSA) agreements with its counterparties and any such impact is currently not quantifiable.

Policies with respect to wrong-way risk exposures:

Wrong way risk arises if the exposure tends to increase when the counterparty credit quality gets worse. Wrong way risk is qualitatively judged at this point by the Bank and the Bank advises its clients in terms of the positions it should avoid so as to mitigate wrong-way risk. The Bank will evaluate quantitative measures to compute the wrong way risk when it feels there is a significant risk to the portfolio.

The Bank does not recognize bilateral netting. The derivative exposure is calculated using Current Exposure Method (CEM) and the balance out standing as on March 31, 2014 is given below.
